

42836N 2-BE SECURITY PUSH SHOE

This textile shoe is developed with a focus on high comfort and breathability. The upper is constructed in perforated textile, making the shoe durable and highly breathable, allowing excess heat to escape from the feet. The smart elastic closure system makes it easy to get in and out of the shoe. The insole is sweat-wicking and helps to draw moisture away from the foot, creating a balanced inner climate. The PU midsole provides extra support in the forefoot and heel, ensuring good shock absorption.
